

Natural Language Processing

Jiří Materna

Machine
Learning
College

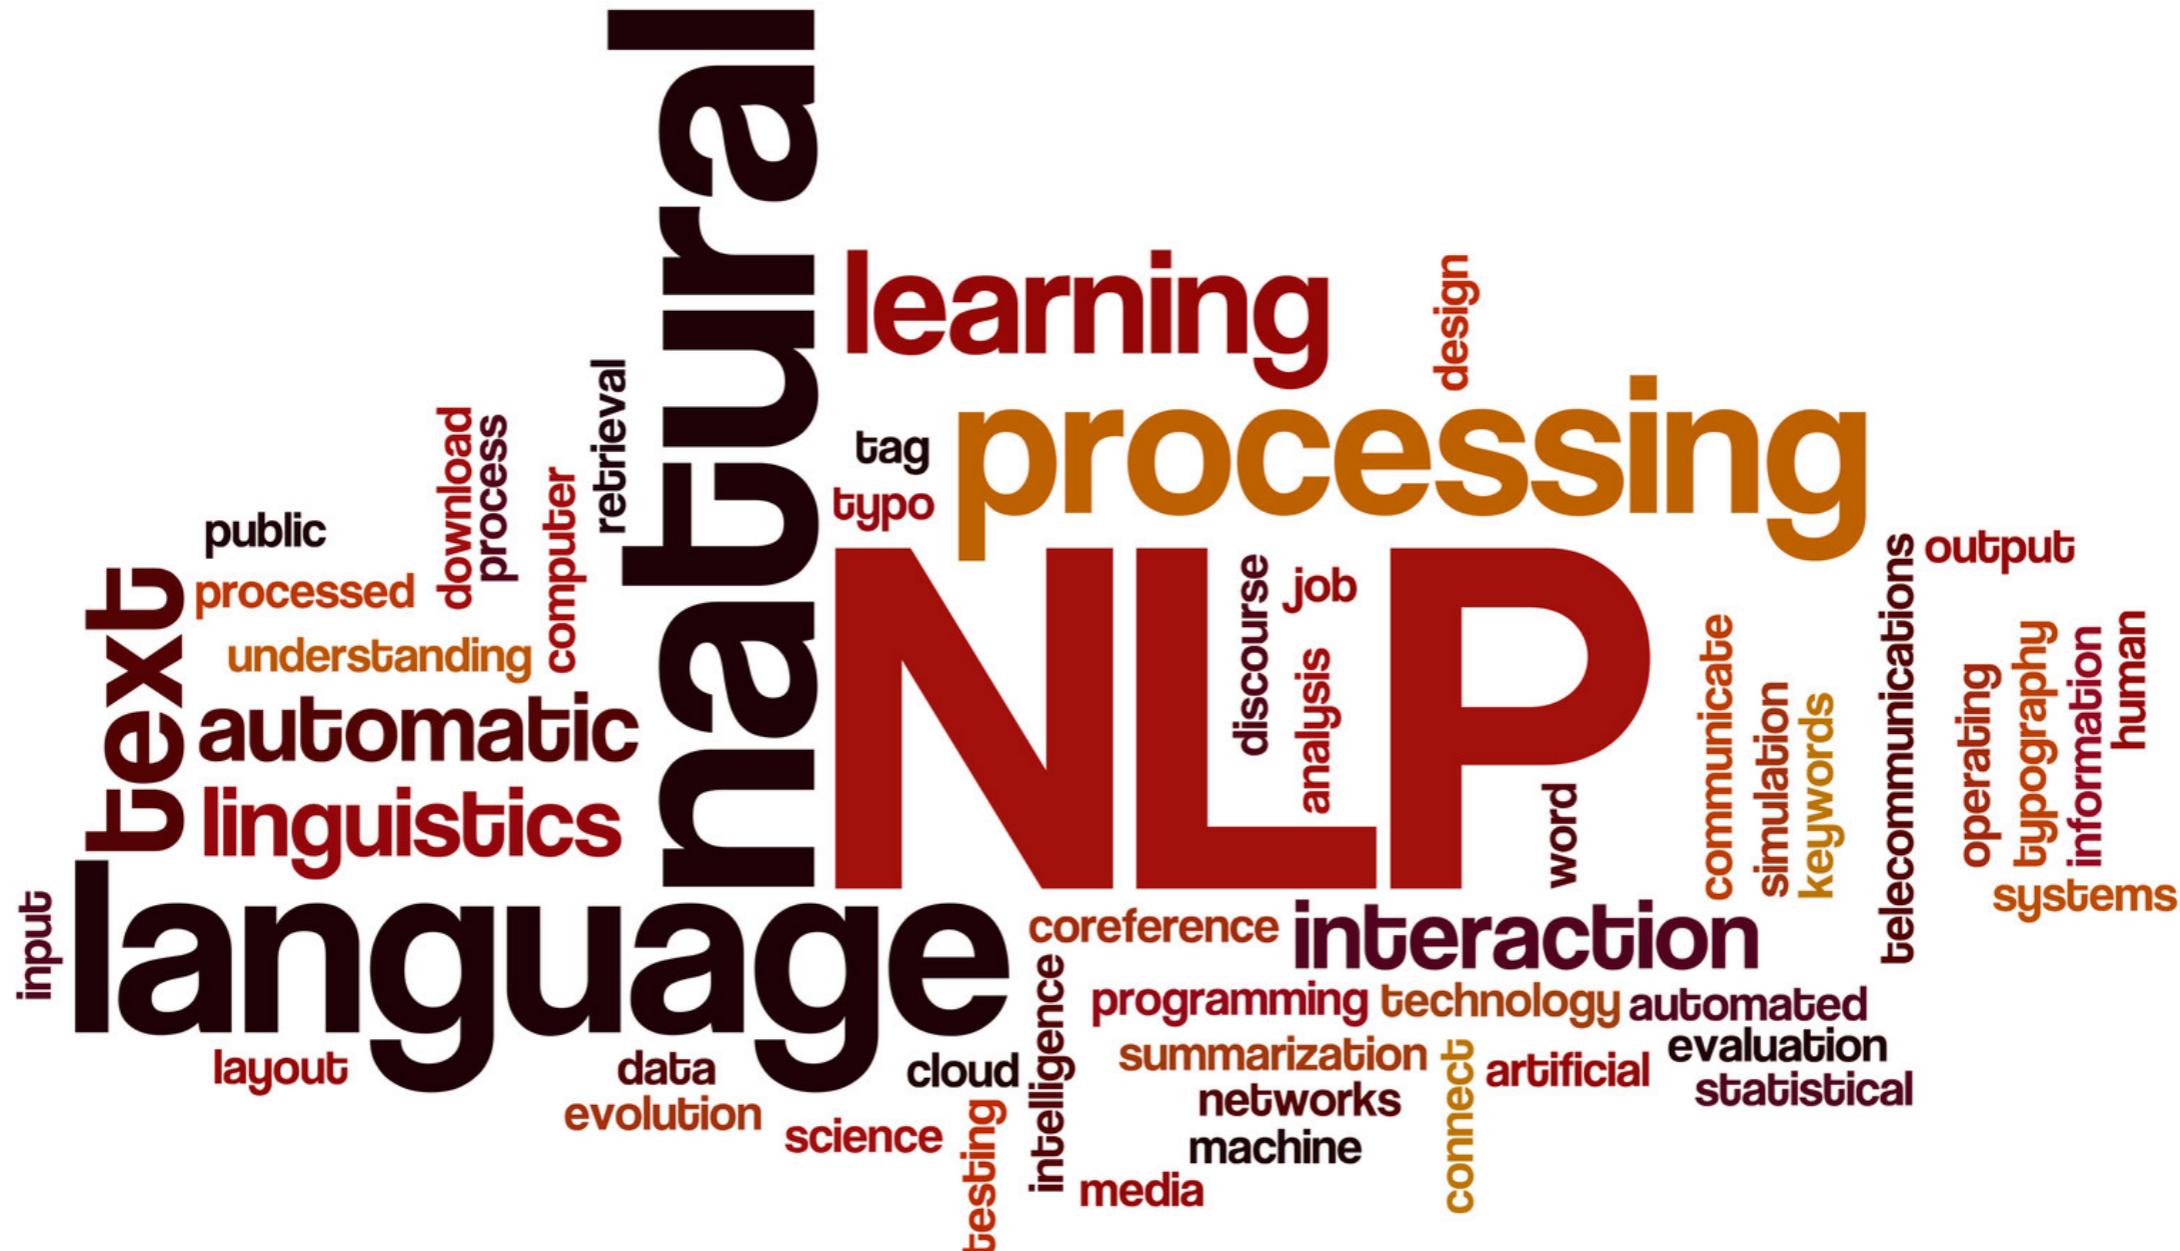

About me

- Ph.D. in Natural Language Processing and Artificial Intelligence at Masaryk University
- 10 years at Seznam.cz (last 8 years as Head Of Research)
- Founder and lecturer at ML College
- Founder and co-organizer of ML Prague
- ML Freelance and consultant

Outline

- Introduction to natural language processing
- Computational linguistics
- Text document vectorization
- Practical document classification task
- Language modeling
- Practical tasks on language modeling
- Word embeddings
- Text generating
- Practical tasks on language modeling

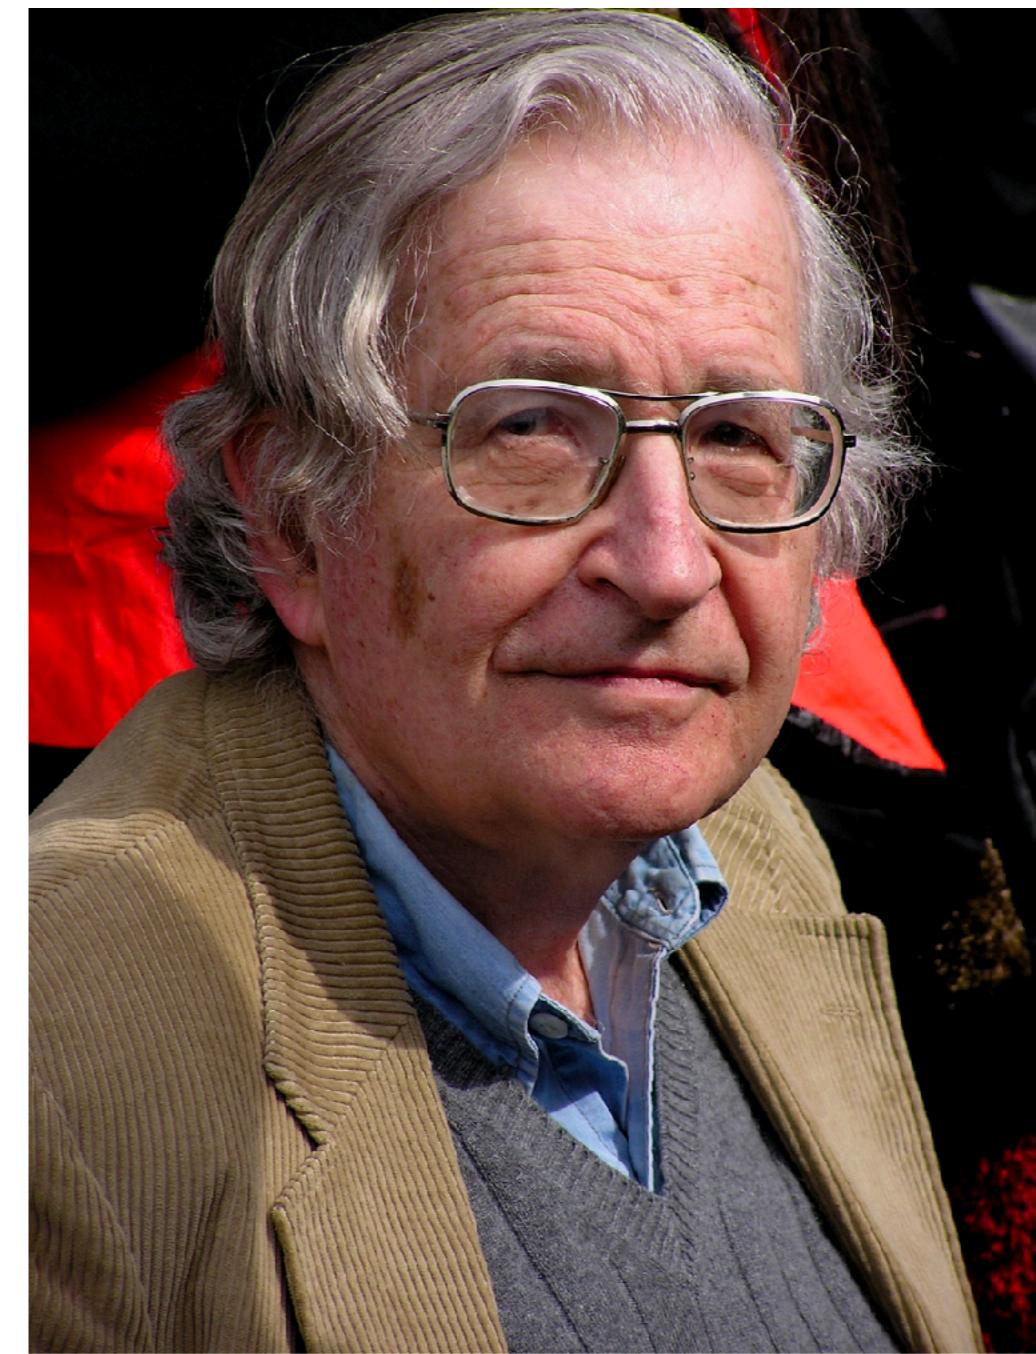

What is Natural Language Processing?

Norvig vs. Chomsky

J2K nature of deixis (see Chapter 2 below) in **natural languages**, for sentences like (II) are true or false only
J2K of the simple but immensely important fact that **natural languages** are primarily designed, so to speak, for use in
J2K . </p><p> The many facets of deixis are so pervasive in **natural languages**, and so deeply grammaticalized, that it is hard
J2K the utterance, within the utterance itself. **Natural language** utterances are thus "anchored" directly to
J2K semantics deals with certain **natural language** expressions. Suppose we identify the semantic
J2K or self-referring expressions in **natural languages**, as in (12) and, arguably, in (13) (see Chapter 5
J2K , is perhaps a philosophical red-herring. **Natural languages**, after all, just do have indexicals, and it is
J2K . Semantics is then not concerned directly with **natural language** at all, but only with the abstract entities
J2K to leave us with no term for all those aspects of **natural language** significance that are not in any way amenable to
J2K of the deictic expressions that occur in **natural languages**, and we should now turn to consider linguistic
J2K in familiar languages. </p><p> Deictic systems in **natural languages** are not arbitrarily organized around the
J2K . But this has the consequence, as we noted, that **natural languages** will only have a syntax and a pragmatics, and no
J2K more or less directly on fragments of **natural language** (as initiated by Montague, 1974) would make
J2K The semanticist who takes the other tack, that **natural language** senses are protean, sloppy and variable, is
J2K offers a way out, for it allows one to claim that **natural language** expressions do tend to have simple, stable and
J2K radical differences between logic and **natural language** seem to fade away. We shall explore this below
J2K on what can be a possible lexical item in **natural languages** . </p><p> Finally, the principles that generate
J0V is meant any single document, or any stretch of **natural language** regarded as a self-contained unit for
J53 recognition and those that can understand **natural languages**, such as English, are known by the collective
HRK through a dialogue, which approaches a **natural language** dialogue, or via a menu. In figure 6.2, the users

Anotace

Všechny básně v této knize byly automaticky vygenerovány počítačem za pomocí umělých neuronových sítí. Neuronová síť sama o sobě nic neumí a je třeba ji natrénovat pro činnost, kterou má vykonávat.

LISTOPAD

usínám, pláču, umírám, přemýšlím
co cítíš ty?
cítím tvou slabost
a whisky

NOVEMBER

I am falling asleep, crying, dying, thinking
what do you feel?
I feel your weakness
and whisky

SPRAVEDLNOST

na tvou dekadentní duši
ráno i v poledne
bůh má připravenou kuší

JUSTICE

for your decadent soul
in the morning, in the evening
the god has prepared a crossbow

Metaphores

...tělo plné červánků...

...body full of blush of dawn...

...tak vzácný jako listí...

...as rare as leaves of trees...

Language models for text generating

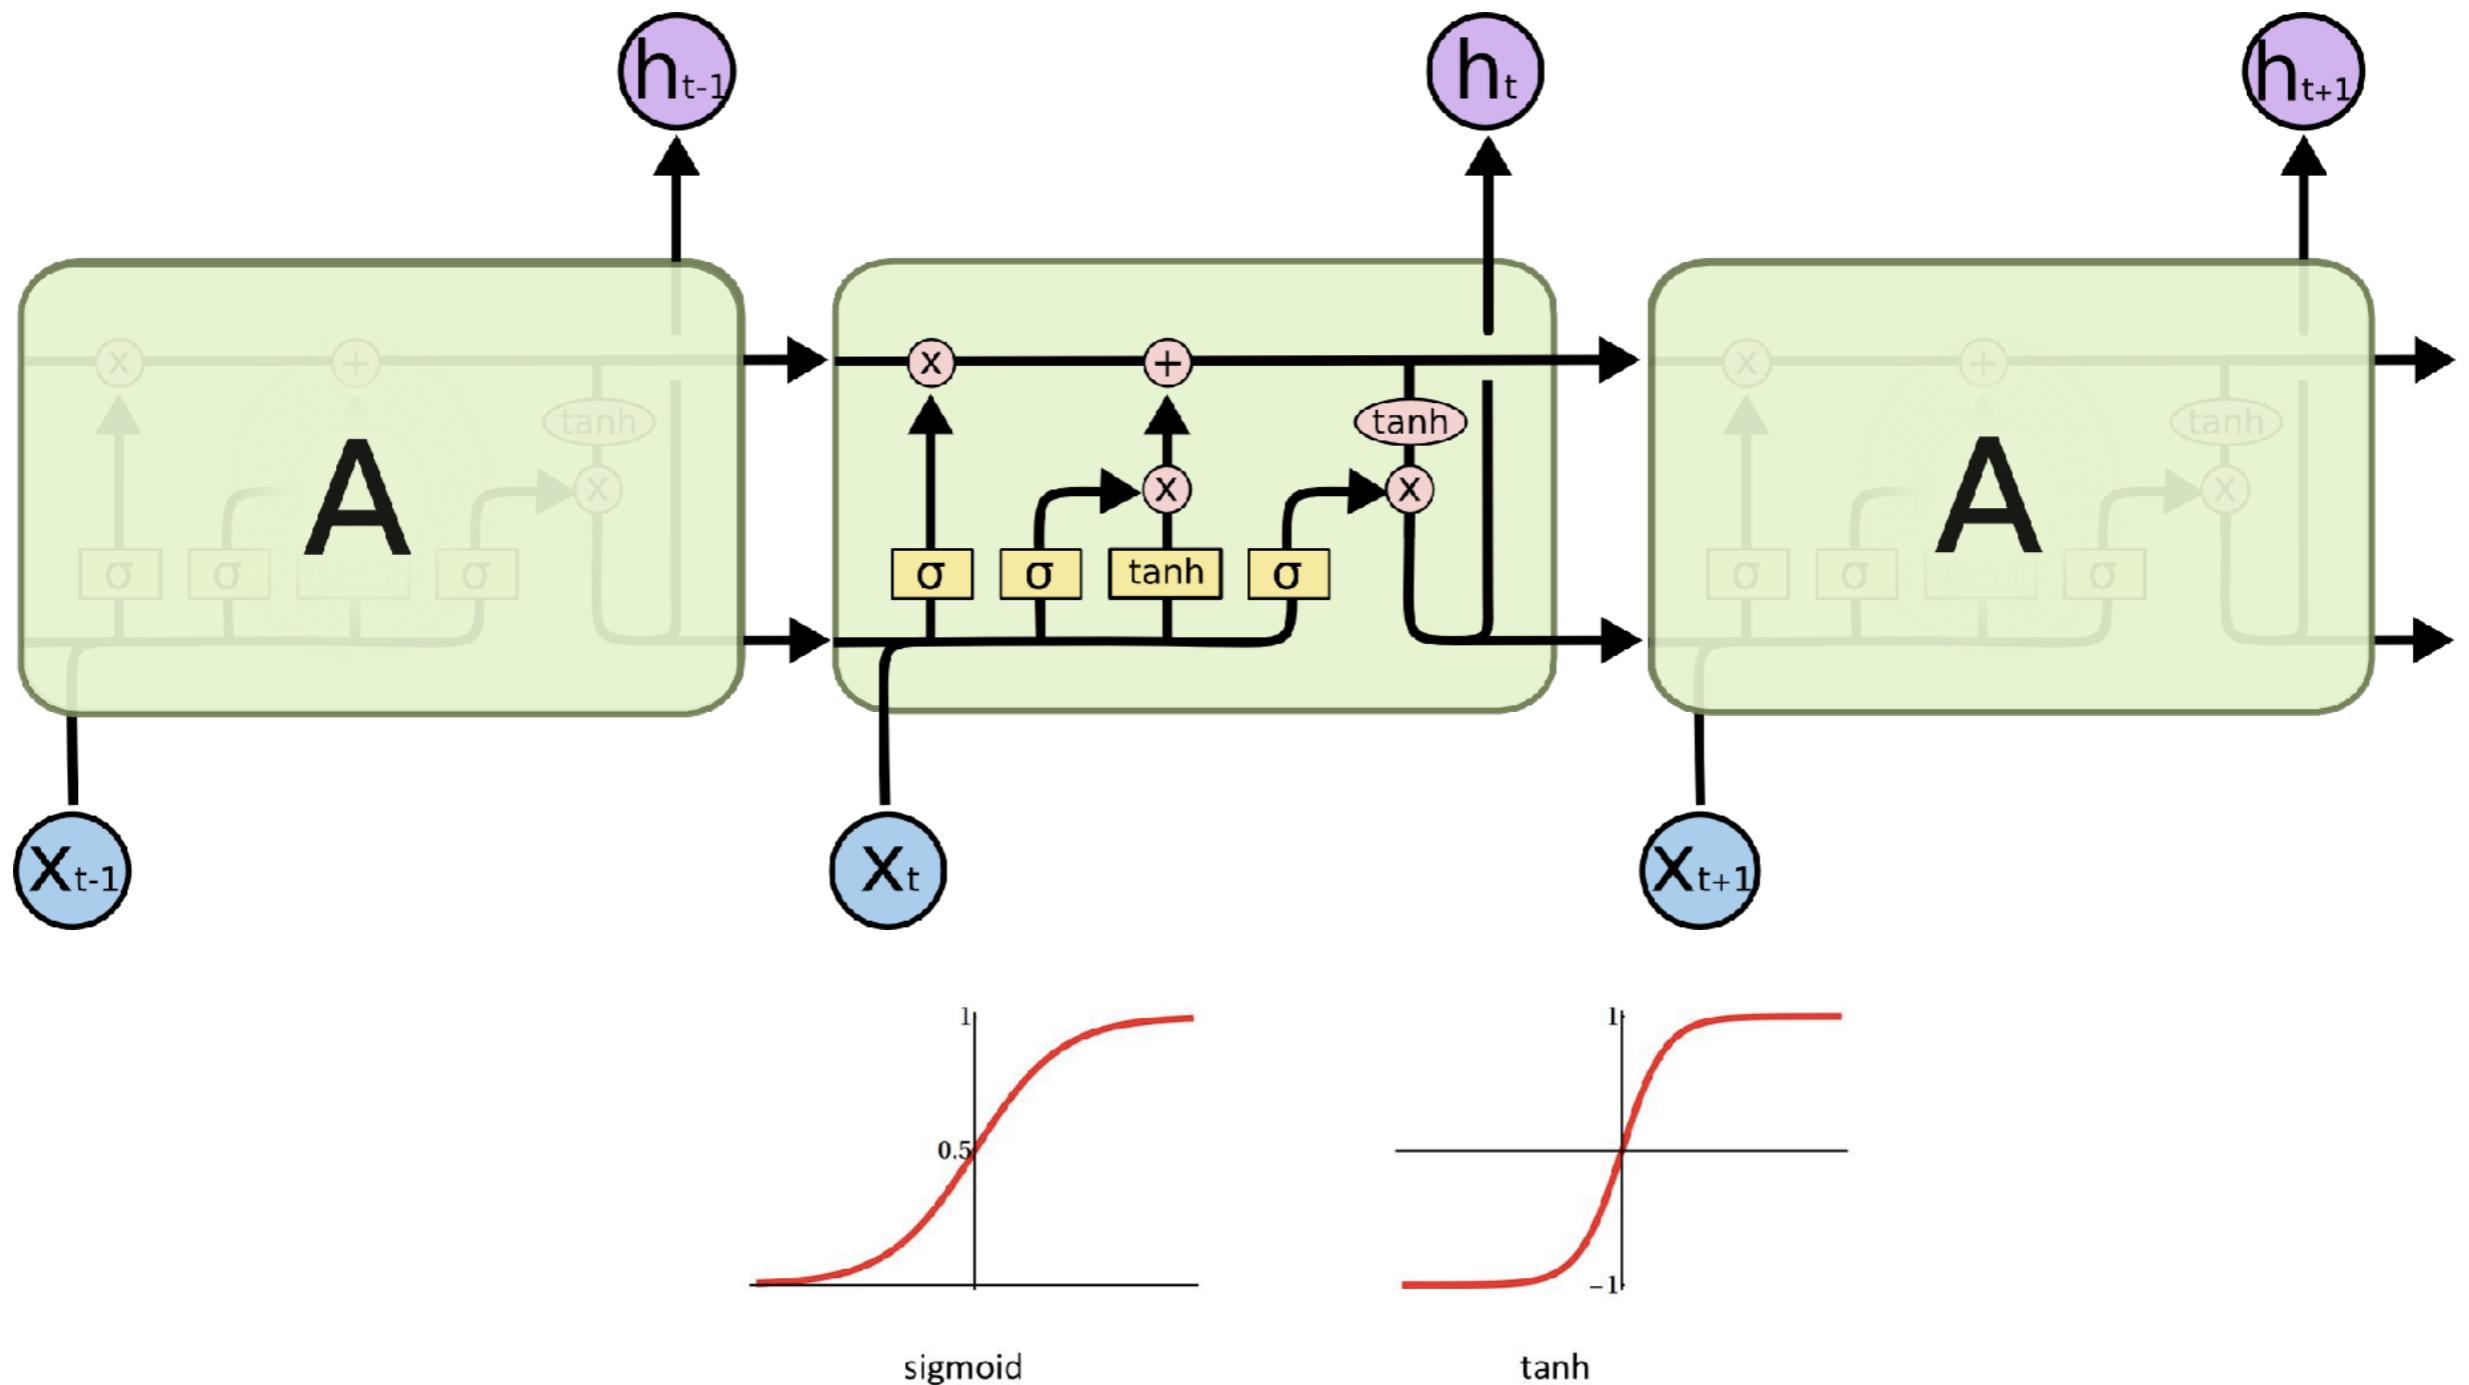

$$P(\text{maso} | \text{máma}, \text{mele}) = 0.5$$

$$P(\text{Emu} | \text{máma}, \text{mele}) = 0.3$$

$$P(\text{tátu} | \text{máma}, \text{mele}) = 0.2$$

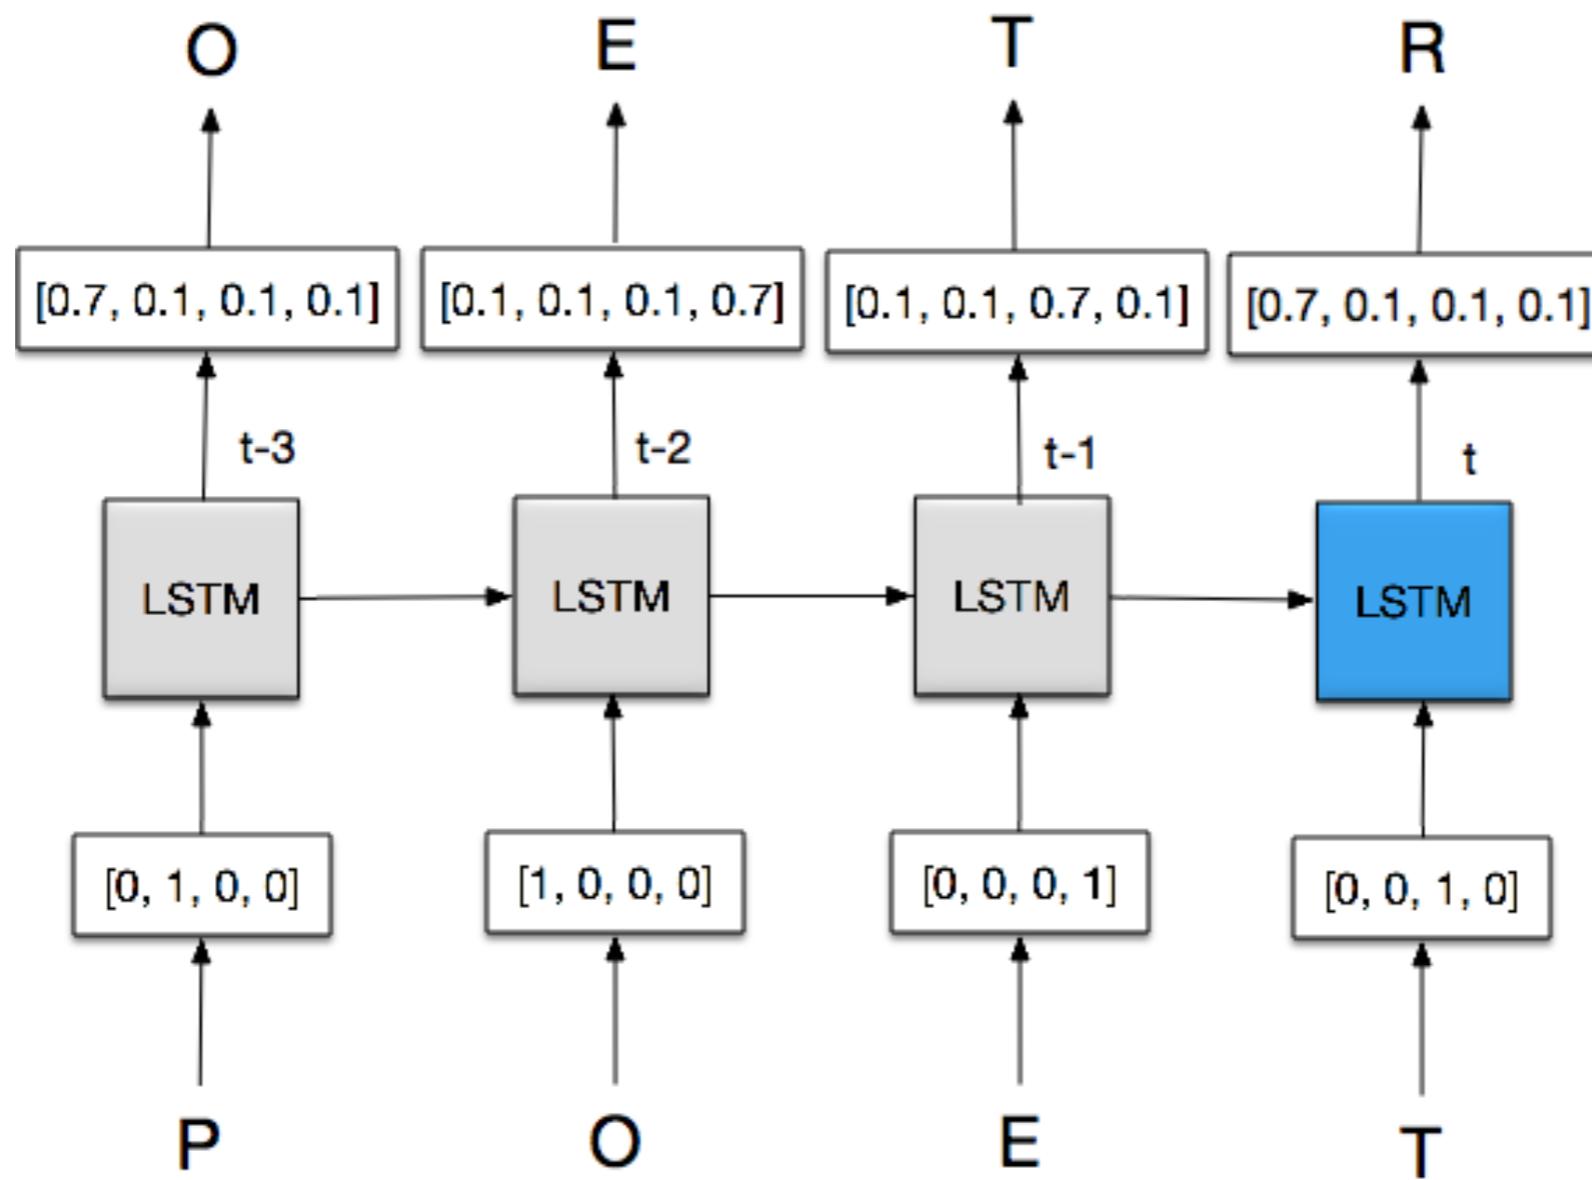

```
t ~ Uniform(0, 1)
s = 0
for v in Vocabulary:
    s += v.prob
    if t < s:
        return v.word
```
